

```
10 class SavavectorObjectTest {  
    public static void main(String[] args) {  
        Vector<Object> v = new Vector<>();  
  
        v.addElement(new Character( value: 'A' ));  
        v.addElement(new String( original: "야야얍" ));  
        v.addElement(new Integer( value: 77 ));  
        System.out.println("vector 생성 직후의 size: "+v.size());  
    }  
}
```

왜 Character랑 Integer은 가운데 줄이생기는 걸까요?
